TECHNICAL DELIVERY REPORT

Forex Trading Workbook

Excel · Automated P&L · Risk Management · Weekly KPI Tracking

PROJECT INFORMATION

PRODUCT **Trading_Workbook_MASTER.xlsx**	PLATFORM **Microsoft Excel (.xlsx)**
LEAD ENGINEER **VQuant Engineering Team**	DATE **April 26, 2026**
SHEETS **5 Active + 1 Hidden Backend**	VERIFICATION **57/57 Formulas Verified**
DELIVERY FORMAT **.xlsx + Documentation**	STATUS **Production Ready**

1 Project Overview

1.1 Objective

We built a **professional-grade Forex Trading Workbook** in Microsoft Excel that automates P&L tracking, risk management calculations, and weekly KPI reporting. The workbook eliminates manual spreadsheet work, enabling traders to focus entirely on execution while the system handles all accounting, performance metrics, and capital management in real time.

1.2 Core Capabilities

- **Automated P&L Engine** — Raw trade data flows automatically into daily summaries and weekly reports via SUMIFS/COUNTIFS formulas
- **Rolling NAV Tracking** — Net Asset Value updates daily based on cumulative P&L, adjusting risk parameters dynamically
- **Weekly KPI Dashboard** — Automatic variance analysis comparing actual performance vs. weekly targets with color-coded alerts
- **Risk Management System** — Dynamic position sizing based on current NAV and user-defined risk percentage
- **Advanced Setup Planner** — Multi-timeframe EMA trend analysis with automated trade mode recommendations (Aggressive/Normal/Avoid)

1.3 Workbook Architecture

SHEET	PURPOSE	TYPE
Instructions	Quick-start guide with step-by-step setup instructions for new users	READ-ONLY
Summary	Main dashboard: monthly targets, Current NAV, cumulative P&L, and Weekly KPI Table	DASHBOARD
Daily Log	Day-by-day trading journal with auto-calculated metrics (Win Rate, R-Multiple, Drawdown)	INPUT + AUTO
Raw daily data	Raw trade history imported from MT4/MT5 broker platform	INPUT
Advanced Setup Planner	Pre-session analysis tool: EMA inputs, trend scoring, and trade mode engine	INPUT + ENGINE
Backend	Hidden lookup tables and engine constants (xlSheetVeryHidden)	HIDDEN

2 Data Flow Architecture

2.1 System Diagram

```
FOREX TRADING WORKBOOK — DATA FLOW

① USER INPUT
├── Raw daily data (Paste from MT4/MT5)
│   Columns: Symbol | Pair | Side | Qty | Price | Profit | DealID | Time
│
├── Daily Log (Type 3 cells per day)
│   Input: Date | Week# | Traded? (Y/N)
│
└── Summary (Set once per month)
    Input: Monthly Target | Planned Days | Risk% | Starting NAV

② AUTO-CALCULATION ENGINE
├── Raw Data → SUMIFS by Date → Daily Log (Net P&L, #Trades, Wins, Losses)
├── Daily Log → Rolling NAV → Risk per Trade, Daily Loss Limit
├── Daily Log → SUMIFS by Week# → Summary Weekly Table
└── Daily Log → SUM all H column → Summary Cumulative P&L, Current NAV

③ OUTPUT (Auto-generated)
├── Current NAV (Starting NAV + Total P&L)
├── Weekly Variance (Actual vs Target with Red/Green alerts)
├── Projected Month P&L (extrapolated from current pace)
├── Win Rate%, Reward:Risk, R-Multiple per day
└── Remaining Target & Required daily P&L to hit goal
```

2.2 Formula Engine Summary

METRIC	FORMULA	LOCATION
Net P&L per Day	=SUMIFS(RawData!Profit, RawData!Date, DailyLog!Date)	Daily Log H
Rolling NAV	=Previous Day NAV + Previous Day P&L	Daily Log E
Risk per Trade ($)	=Current NAV × Risk%	Daily Log F
Daily Loss Limit	=Risk per Trade × Max Daily Loss (R)	Daily Log G
Win Rate	=Winning Trades / Total Trades	Daily Log S
R-Multiple	=Net P&L / Risk per Trade	Daily Log U
Cumulative P&L	=SUM(Daily Log H2:H100)	Summary B11
Current NAV	=Starting NAV + Cumulative P&L	Summary F10
Weekly Net P&L	=SUMIFS(DailyLog!H, DailyLog!Week#, WeekNum)	Summary F22:F25
Week Variance	=Week Net P&L - Weekly Target	Summary H22:H25

3 Sheet-by-Sheet Specification

3.1 Summary Dashboard

The Summary sheet is the **command center** of the workbook. It is divided into two sections:

Section A — Monthly Overview (Rows 1-19)

CELL	LABEL	FORMULA	EXAMPLE
B2	Monthly P&L Target	User input	$2,000
B3	Planned Trading Days	User input	20
B4	Avg Target per Day	=B2/B3	$100
B6	Avg Target per Week	=B2/B5	$500
B8	Risk % of NAV	User input	5%
B10	Starting NAV	User input	$10,000
F10	Current NAV	=B10+B11	$11,050
B11	Cumulative P&L	=SUM(DailyLog!H2:H100)	$1,050
B12	Remaining Target	=B2-B11	$950
B13	Trading Days Used	=COUNTIFS(DailyLog!D:D,"Y")	4
B15	Required P&L/Day	=B12/B14	$59.38
B17	Projected Month P&L	=(B11/B13)*B3	$5,250

Section B — Weekly KPI Table (Rows 21-25)

COLUMN	HEADER	SOURCE FORMULA
A	Week #	Static: 1, 2, 3, 4
B	Active Days	=COUNTIFS(DailyLog!Week#, ThisWeek, DailyLog!Traded, "Y")
C	Total Trades	=SUMIFS(DailyLog!#Trades, DailyLog!Week#, ThisWeek)
D	Total Wins	=SUMIFS(DailyLog!#Wins, DailyLog!Week#, ThisWeek)
E	Total Losses	=SUMIFS(DailyLog!#Losses, DailyLog!Week#, ThisWeek)

COLUMN	HEADER	SOURCE FORMULA
F	Week Net P&L	=SUMIFS(DailyLog!NetPnL, DailyLog!Week#, ThisWeek)
G	Weekly Target	=B6 (auto from monthly target)
H	Week Variance	=F-G (Green if positive, Red if negative)
I	Avg Win Rate	=TotalWins/TotalTrades

3.2 Daily Log

The Daily Log is the **heart of the calculation engine**. Users input only 3 cells per day; the remaining 20+ columns auto-calculate.

COLUMN	HEADER	TYPE	DESCRIPTION
A	Date	INPUT	Trading date (e.g., 5/1/2026)
B	Week #	INPUT	Which week this day belongs to (1-4)
C	Day of Week	Auto	=TEXT(A,"dddd") → Monday, Tuesday...
D	Traded?	INPUT	Type "Y" if you traded that day
E	Start NAV	Auto	Rolling: Previous NAV + Previous P&L
F	$ per Trade	Auto	=NAV × Risk% (dynamic position sizing)
G	Daily Loss Limit	Auto	=Risk$ × Max Daily Loss multiplier
H	Net P&L	Auto	=SUMIFS from Raw Data by date
I	Cumulative P&L	Auto	Running total from day 1
N	# Trades	Auto	=COUNTIFS from Raw Data by date
O	# Wins	Auto	=COUNTIFS where Profit > 0
P	# Losses	Auto	=COUNTIFS where Profit < 0
S	Win Rate	Auto	=Wins/Trades
T	Reward:Risk	Auto	=TotalWin$/TotalLoss$
U	R-Multiple	Auto	=Net P&L / Risk per Trade

3.3 Raw daily data

This sheet receives **raw trade history** exported from MT4/MT5. Users paste data directly; the system auto-generates Trade Date and Cumulative P&L columns.

COLUMN	HEADER	TYPE
A	Symbol	INPUT
B	Name	INPUT
C	Side (Buy/Sell)	INPUT
D	Quantity	INPUT
E	Price	INPUT
F	Profit ($)	INPUT — Green if +, Red if -
G	Deal ID	INPUT
H	Time	INPUT
I	Trade Date	Auto — extracted from Time
J	Cumulative P&L	Auto — running total

4 Security & Protection

MEASURE	IMPLEMENTATION
Sheet Protection	All formula cells locked. Only green input zones are editable. Password: provided separately.
Hidden Backend	Backend sheet set to xlSheetVeryHidden — invisible even from right-click menu
IFERROR Wrappers	All division formulas wrapped to prevent #DIV/0! errors when data is empty
Input Validation	Dropdown lists and data validation rules on key input cells
Column Resizing	Protection allows column/row resizing for comfortable viewing

5 Verification & Quality Assurance

5.1 Automated Backend Verification

A Python verification script (**verify_backend.py**) independently recalculates every formula using raw data, then compares results against Excel cell values.

> **VERIFICATION RESULT**
>
> **57/57 cells verified — 100% match.** All calculations across Summary, Daily Log (4 days × 7 metrics), and Weekly Table (4 weeks × 5 metrics) produce identical results in both Python and Excel.

5.2 Test Scenario Used

DAY	DATE	WEEK	TRADES	P&L	CUMULATIVE
1	May 1	1	1 Buy (+$250)	+$250	$250
2	May 9	2	2 Sell (-$100 each)	-$200	$50
3	May 17	3	1 Buy (+$800)	+$800	$850
4	May 18	3	1 Buy (+$200)	+$200	$1,050

5.3 Cross-Check Results

CHECK	EXPECTED	ACTUAL	STATUS
Current NAV (F10)	$11,050	$11,050	PASS
Cumulative P&L (B11)	$1,050	$1,050	PASS
Week 1 P&L	$250	$250	PASS
Week 2 P&L	-$200	-$200	PASS
Week 3 P&L	$1,000	$1,000	PASS
Remaining Target	$950	$950	PASS
Projected Month	$5,250	$5,250	PASS

6 User Quick-Start Guide

1 Set Monthly Goals

Summary Sheet — One-time setup

- Open the Summary tab and fill in: Monthly Target ($), Planned Trading Days, Risk %, Starting NAV
- The system auto-calculates daily/weekly targets and risk parameters

2 Import Raw Trade Data

Raw daily data Sheet — After each trading session

- Export trade history from MT4/MT5 as CSV or copy from broker platform
- Paste into Raw daily data tab using **Ctrl+Shift+V** (Paste as Values) to preserve formatting
- Columns A-H are input; Columns I-J auto-calculate

3 Log Your Trading Day

Daily Log Sheet — 3 cells per day

- Column A: Enter the date (e.g., 5/1/2026)
- Column B: Enter the week number (1, 2, 3, or 4)
- Column D: Type "Y" if you traded that day
- Press F9 if needed — all 20+ columns auto-populate instantly

4 Review Your Performance

Summary Sheet — Real-time dashboard

- Current NAV shows your updated account balance
- Weekly Table shows performance by week with color-coded variance (Green = above target, Red = below)
- Projected Month P&L shows your estimated end-of-month result based on current pace

7 Deliverables
